

MEXICO: Scattered showers (5-60 mm) fell across the main corn belt, providing some moisture for corn. The heaviest rain fell in the states of Jalisco and Mexico (30-60 mm). Rain (2-40 mm) increased moisture supplies across the Rio Grande Valley, but mostly dry weather prevailed elsewhere in the northeast and northern Mexico. Dry weather also prevailed across the Yucatan Peninsula and the southern states of Guerrero and Oaxaca. Temperatures averaged near normal across the main corn belt.
